INSTRUCTIONS FOR FEEDING

Mintrate 36/15 Breed-Right Tub is designed for self-feeding to growing and mature breeding cattle. Provide free choice as a supplement to pasture cattle at the rate of 10 to 20 head per tub. Place tubs in pastures near areas frequented by cattle, such as watering locations, shade or loafing areas. Consumption may vary depending on number of head per tub, climate, grazing conditions, and condition of cattle and/or availability of other feeds. Cattle typically consume 1.25 to 2.50 pounds per head daily. In situations where climate and/or other factors result in consumption other than desired, intake of supplement can be increased or decreased by adding or reducing tubs per pasture. Provide free access to fresh, clean water at all times.

WARNING: This feed should be used only in accordance with the instructions furnished on the label.

CAUTION: Consumption of this product by sheep and goats may result in copper toxicity. This feed contains a source of non-protein nitrogen. The equivalent protein supplied by non-protein nitrogen should not exceed 1/3 of the crude protein of the total ration. Use only as directed.

This product was made in a feed manufacturing facility that does not handle or store products containing animal proteins prohibited in ruminant feeds.
