- Sauces & dressings

Create consumer-preferred food and beverage products that help improve cognitive, heart and eye health—leveraging our unrivaled portfolio of ingredients and unparalleled applications expertise.

Consumers are increasingly looking for opportunities to improve their overall health. DHA, an extensively researched Omega-3, can be incorporated into foods and beverages to support cognitive, heart and eye health.

The content of this brochure should not be deemed to be a final product label advice or recommendation. Our customer is and stays at any time responsible for assuring that any claims made on their labels are consistent with their final product formulation and all relevant laws and regulations. The ability to refer to the health or nutrition benefits of foods, such as those mentioned above, varies by region. Therefore if considering label claims, please contact your local ADM representative for information relevant to specific regions.
Onavita™ is a high-quality, non-GMO product line of Omega-3s from ADM.

**WHY OMEGA-3s?**

Omega-3 fatty acids are considered important nutrients for humans, vital for proper cell function and credited with key benefits for the brain and body, including cognitive development and heart & eye health.

**Omega-3 DHA** is a naturally occurring substance found throughout the body and concentrated in the brain, eyes and heart. It contributes to healthy nervous system development and function throughout all stages of life.

**Omega-3 ALA** is the essential Omega-3 necessary for normal human growth and development. ALA must be obtained through diet or supplementation since it’s not produced by the body. ALA is needed to make DHA & EPA and has been credited with maintaining the health of the cardiovascular system.
