GN 99131

Early Maturing Great Northern

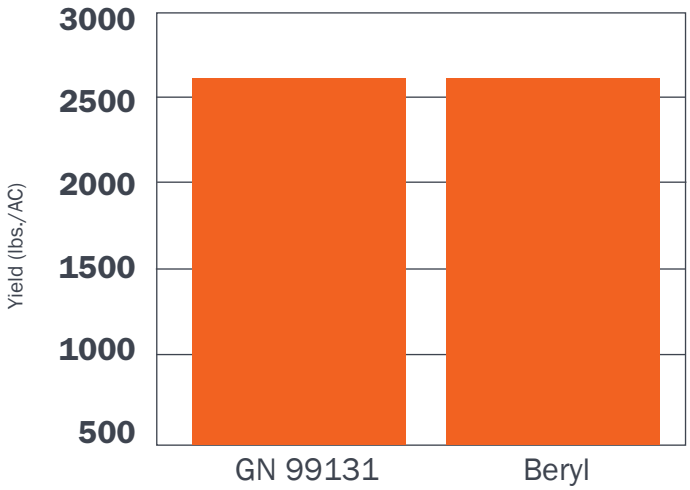
GREAT NORTHERN

GN 99131 - Early Maturing Great Northern

Profile:
GN 99131 is an upright, short vine, medium profile variety that arches over. It is a high yielding, early maturing variety suitable for replanting and late plantings, and is similar in maturity to Ivory. GN 99131 is best utilized on strong ground due to its shorter vine. It also has acceptable canning characteristics.

Economic Profile:
Growing this early maturing proprietary variety can provide a high yielding option for replanting or during a year when a late plant is needed. GN 99131 also typically provides a larger seed size than Beryl without a significant sacrifice in yield.

GN 99131 VS. BERYL*



*Data from the Great Plains region

TRIAL DATA

GN 99131*

Approx. Maturity	98-102days
Plant Type	3B
Approx. Seed Count	1,386 seeds/lb.
Disease Resistance	**IR:** BCMV

*See reverse side for disease resistance abbreviation chart

For customers around the world, ADM draws on its resources—its people, products, and market perspective—to help them meet today's consumer demands and envision tomorrow's needs.

Early Maturing - GREAT NORTHERN

KEY TO RESISTANCE ABBREVIATIONS FOR BEANS

Plant Type 1A	Bush determinate erect stem
Plant Type 2A	Erect growth indeterminate short runners
Plant Type 2B	Erect growth indeterminate with medium to long runners
Plant Type 3B	Prostrate vine indeterminate growth with long runners
BCMV	Bean common mosaic caused by the specified strains of Bean common mosaic virus
BCTV	Curly top caused by Beet curly top virus
BGYMV	Bean golden yellow mosaic caused by Bean golden yellow mosaic virus
CI	Anthracnose caused by Collectrichum lindemuthianum
Psp	Halo blight caused by Pseudomnas savastanoi pv. phaseolicola
Pss	Bacterial brown spot caused by Pseudomaonas syringae pv. syringae
Ua	Rust caused by the specified races of Uromyces appendiculatus
HR	**High Resistance:** describes plant varieties that highly restrict the growth and development of the specified pest or pathogen under normal pest or pathogen pressure when compared to susceptible varieties. Highly resistant varieties may, however, exhibit some symptoms or damage under heavy pest or pathogen pressure.
IR	**Intermediate Resistance:** describes plant varieties that restrict the growth and development of the specified pest or pathogen, but may exhibit a greater range of symptoms or damage compared to highly resistant varieties. Intermediately resistant varieties will still show less severe symptoms or damage than susceptible plant varieties when grown under similar environmental conditions and/or pest or pathogen pressure.

In cases where specific races or strains are not noted the variety is resistant to some, but not necessarily all known races or strains of the pathogen.
